SUMMARY

Life sciences researcher with six years applying structured, quantitative problem-solving to ambiguous problems in neuroscience and medical-device research. On the anatomy workstream of a \$15.75M multi-site NIH program, consolidated data from fragmented sources into one standardized database by building AI-assisted Python workflows to replace manual processes. Co-first author on peer-reviewed work in neuroscience and psychology. Experienced translating technical findings for clinical, engineering, and non-expert audiences.

EDUCATION

University of California, Berkeley

May 2020

B.A. Integrative Biology · B.A. Psychology · Regents' and Chancellor's Scholar (2016–2020)

CORE SKILLS

- **Problem Solving & Analysis:** Structured problem decomposition · quantitative analysis · data modeling & QC · Excel · PowerPoint · Python (AI-assisted automation) · R · SPSS
- **Life Sciences Domain:** Biopharma & medical-device research · neuromodulation & neuroprosthetics · clinical trial operations · IRB / HIPAA / GCP-aware · regulatory documentation
- **Client & Team:** Cross-functional coordination · client- and stakeholder-facing communication · mentoring & instruction · REDCap · Qualtrics

EXPERIENCE

Case Western Reserve University — Shoffstall Lab, Cleveland, OH

Feb 2024 – Jan 2026

Research Assistant III

- Consolidated ~200 nerve-branch records per cadaver across 60 separate spreadsheets into one unified database with standardized data collection (~12,000 records, 6,000+ images).
- Served as point of contact for data handoffs to clinical and engineering teams on \$15.75M multi-site program; set shared protocols, timelines, and data-sharing standards that kept a distributed group on a single roadmap.
- Built AI-assisted Python automation for data ingestion, QC, and standardization, improving data reliability.
- Co-authored 4 open datasets and 3 protocols now used by external research and device teams.

University of California, San Francisco — Neurodevelopmental Assessment & Imaging Lab

Jan 2023 – 2024

Clinical Research Coordinator

- Served as primary client-facing contact for clinical research trials, managing expectations and retention through a complex, months-long process.
- Built partnerships with clinics and schools to drive study enrollment.
- Translated clinician/researcher requirements into workflows that held up under real-world participant constraints.
- Served as independent QC on 11 standardized assessments scored by PhD-level raters, resolving discrepancies.
- Ensured regulatory compliance (IRB submissions, amendments, renewals; HIPAA) to keep project audit-ready.

EARLIER EXPERIENCE

NorCal Brain Builders Neurotherapy — Neurofeedback Technician (Jun 2020 – Nov 2021): Piloted consumer wearables to capture biometric data for an early digital-health data-integration effort.

Amethod Public Schools — Teacher (Oct 2021 – Jun 2022): Diagnosed individual performance gaps across 120 students and designed targeted intervention plans; translated technical material for individuals with widely varying baselines.

Medical Reallocation Initiative — Chief Marketing Officer (Aug 2019 – May 2020): Led marketing strategy for student venture redistributing surplus medical supplies.

SELECTED PUBLICATIONS & PRESENTATIONS

- Co-first author for research in neuroscience – Zhang J., Lam V. H., et al. (2025). Mapping the Fascicular Morphology and Organization in Human Sciatic Nerve via High-Resolution MicroCT Imaging. (Under review at Springer Nature, 2026), 10.1101/2025.06.28.662133
- Author on peer-reviewed research on autism – Simarro Gonzalez et al. (2024), Beyond Words, *Frontiers in Psychiatry*, 15:1379307
- Co-author on 4 open datasets (REVA — Pennsieve) and 3 published protocols (protocols.io), 2025–2026; full list available on request.
